

Neoapiciclina p/loque

Ref: TRA017

When bees start breeding, an imbalance can occur that opens the door to diseases that jeopardize the survival of the hive and the development of the colony. This same situation can occur at the end of the year, when preparing the hive for winter, or when there is a sudden stop in flowering during full development. In these cases, NeoApiciclina is a preparation that provides the hive with the special compounds necessary for the bees to develop harmoniously, avoiding the appearance of these problems and aiding in their recovery if they have already occurred.

Directions for use:

Sprinkle about 20g on top of the brood and bees (2 tablespoons) per hive. Repeat 3 times every 7 days to cover two complete generations of open brood. It can also be used to enrich syrups, in this case for immediate consumption, preparing only what the bees will consume immediately, adding 3 tablespoons per liter of syrup. It can also be used to enrich food tablets by adding the same amount, 3 tablespoons per kilo of prepared tablet.

Composition:

Raw materials for animal feed: sugar (sucrose) and wheat flour. Additives: Botanically defined natural product, plant extracts (with 80mg of flavonoids / 100g of Neo-Apiclina); Vitamins and provitamins: Calcium Pantothenate 1mg / Kg - Vitamin B1: 0.2 mg / Kg - Vitamin B2: 0.4 mg / Kg - Vitamin B6: 0.02 mg / Kg - Vitamin A: 120 IU / Kg - Vitamin D3: 40 IU / Kg. (Substances), silicon dioxide E551; preservative.
