

### Thermometer for still

Ref: ALB024

Thermometer with circular display from 0° to 120°C

Thermometer with circular display from 0° to 120°C

The thermometer of the still serves to measure and monitor the temperature during the distillation process. Temperature is a crucial aspect in distillation as it directly affects the separation of components in the distilled liquid. The thermometer helps ensure that the temperature is within the appropriate range to produce the desired product with quality and consistency. Additionally, it allows the operators of the still to adjust the heating intensity to optimize the process and prevent damage to the equipment or the final product.

Can be adapted to stills from 20 liters.

Available 1 to 2 weeks after payment.
